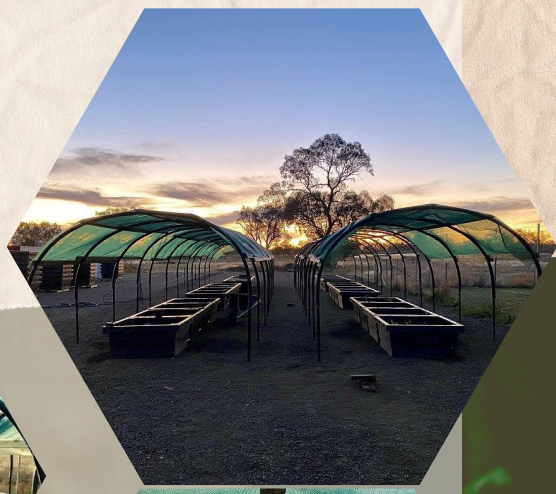
Wicking Bed & Poly Tunnel Shade Structure

Construction day 28.9.2020

With months of discussion and preparation the team were very excited to start on assembling the wicking beds and build shade structures for the community gardens.

Annie Deane from WAMS, Mel Wimborne, UNSW Makerspace Network Manager and 3 students, Jasper Smith, Niall Earle, and Lucy Birdsey led a very productive and successful day. Starting at 7:30am they assembled 24 wicking beds (6 x 4 groups of beds) and shade structures before the sun set.


The team worked very well together with the same common goal for the community gardens, planting the first crop for the new garden.
